One-man system:

The Wickel Star II fleece winder successfully supports the cultivation and care of strawberries, asparagus and other vegetables. **It can unwind and wind fleeces, nets and light films.** The fleece winder has a solid frame construction made of tube and edge profiles. Its extension arms can accommodate up to 2500 mm of tube. **The hydraulic tubular drive and automatic winding unit are operated from the tractor.** Above all, its self-swivelling winding arm inspires all along the line, saving the use of workers in the winding area. The fleece winder can be optionally equipped with a front loader adapter from Metasa. This enables film to be optimally placed at the appropriate height for film tunnels or hail protection systems. All tube supports of the Wickel Star II fleece winder are ball bearing mounted. Due to the arrangement of the bearings, the tubes run easily and without chattering.

The fleece winder thus works with gentle operation on the fleece and film.
